Hello! I am Sachin Jadhav,

Senior UI/UX Designer

I am a Senior UI/UX Designer based in India with 16+ years of experience in web design and development, including 6 years specializing in UI/UX design.

I design intuitive, scalable digital experiences for enterprise applications and SaaS platforms, along with government systems, healthcare products and responsive websites — bringing product UX, interaction design and design systems together with a frontend background that makes collaboration with developers straightforward.

16+ YEARS
WEB DESIGN & DEVELOPMENT

6 YEARS
UI/UX DESIGN

DESIGN FOCUS

- Enterprise applications & SaaS
- Design systems
- Frontend collaboration
- Product UX & interaction design
- Responsive web design

EXPERIENCE

16+ Years
WEB DESIGN & DEVELOPMENT

6 Years
UI/UX DESIGN

SKILLS

WHAT I BRING

PRODUCT & UX DESIGN

User Research · Information Architecture · User Flows · User Journey Mapping · Wireframing · Prototyping · Interaction Design · Accessibility

UI DESIGN & DESIGN SYSTEMS

Visual Design · Design Systems · Responsive Design · Developer Handoff

DEVELOPMENT & IMPLEMENTATION

HTML5 · CSS3 · SASS · JavaScript · React.js · Tailwind CSS · Bootstrap · WordPress · Shopify · OpenCart

DESIGN TOOLS

Figma · Adobe Photoshop · CorelDRAW

STRUCTURED METHODOLOGY

DESIGN APPROACH

My general approach across web and product work. Individual projects adapt it — WorkFusion HRMS, for example, used a project-specific six-step workflow.

01

UNDERSTAND

Understand business requirements, content structure, target audience, and primary experience goals.

→

02

DEFINE

Define information architecture, navigation flows, key page hierarchy, and content priorities.

→

03

DESIGN

Develop wireframes, visual design direction, responsive layouts, and reusable UI components.

→

04

REFINE

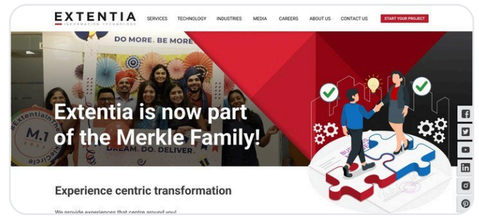

Review visual consistency, responsive behavior, overall usability, and developer implementation feasibility.

Findings from Refine feed back into Define and Design, so stages repeat until the structure and UI hold up.

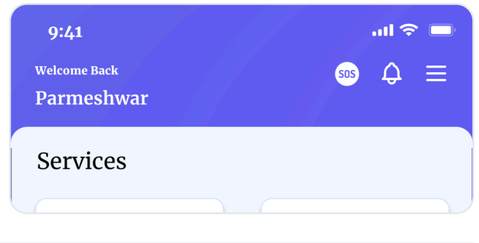

CONTENTS

SELECTED WORK

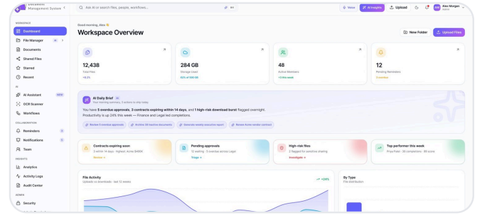

01 **EXTENTIA WEB UI DESIGN**
WEB DESIGN / UI/UX / DIGITAL EXPERIENCE
13 MAR 2022 — 20 SEP 2022 p. 05

01

SELECTED WORK / CASE STUDY 01

EXTENTIA WEB UI DESIGN

TIMELINE

13 March 2022 — 20 September 2022

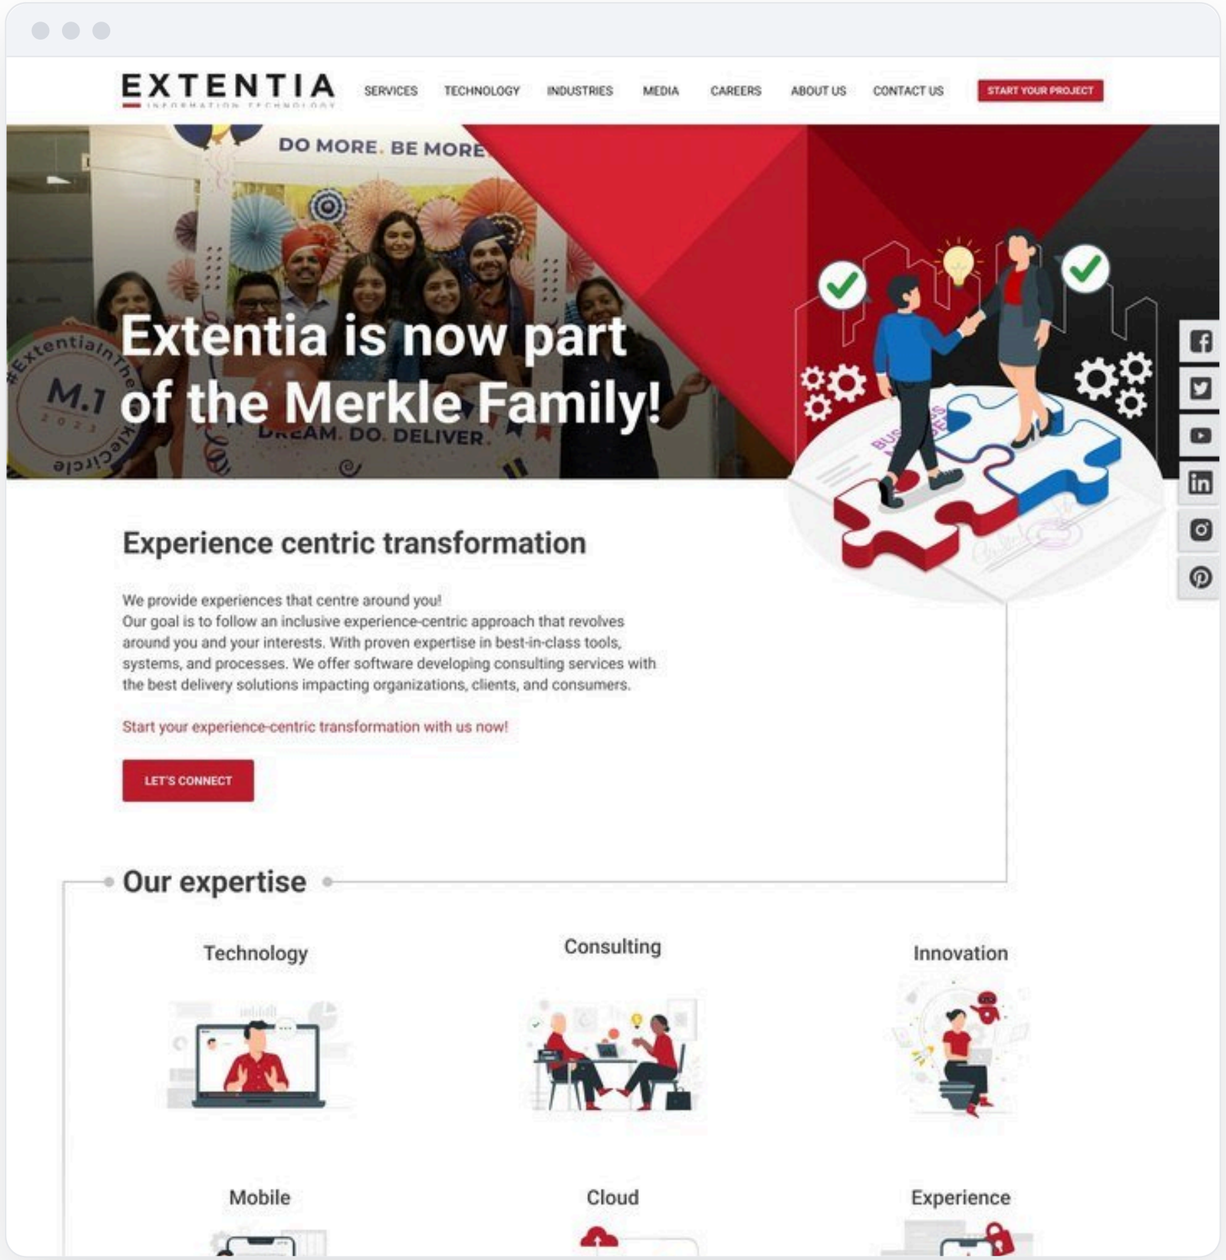

CATEGORY

Web Design / UI/UX / Digital Experience

ROLE

UI/UX Designer / Web Designer

A professional web UI design project focused on creating a polished, modern and consistent digital experience for Extentia, enhancing navigation, typography hierarchy and visual clarity of content.

HOME PAGE — DESKTOP

SYSTEM FOUNDATIONS

VISUAL DESIGN

A compact style guide kept typography, color, cards and buttons consistent across the site.

COLOR PALETTE

#000000	#BE1E2D	#414042
#808285	#A7A9AC	#E6E7E8

Sampled from the palette in the original portfolio.

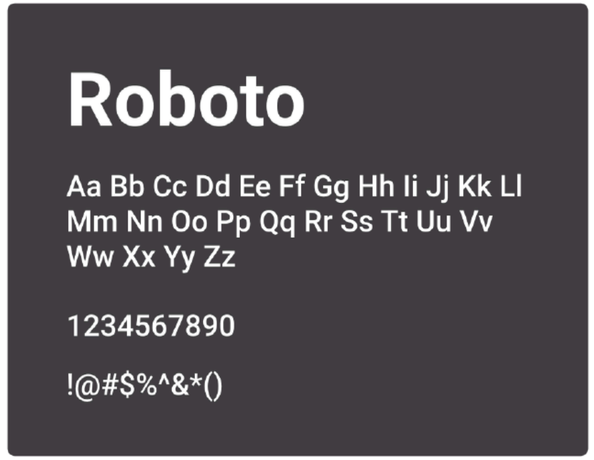

SECONDARY COLORS

#1170C0	#23B050	#FDC000	#C00000

COMPONENTS & LAYOUT

Structured grid system, responsive card patterns, clear interactive state changes, and accessible form controls.

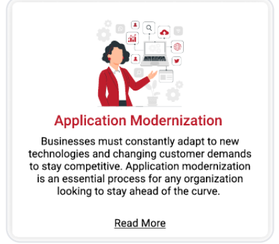

TYPOGRAPHY — ROBOTO

Heading 1 Roboto · 68 px · Bold
Heading 2 Roboto · 36 px · Bold · #3E3E3F
Content Roboto · 18 px · Regular · #3E3E3F

Clean, modern sans-serif typography focused on high legibility across desktop and mobile browsers.

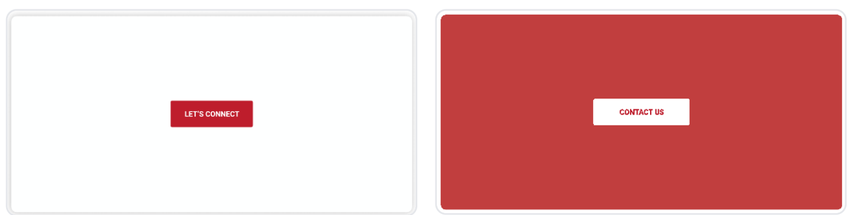

CARD STYLE

Title Roboto · 24 px · Medium · #BE1E2D
Content Roboto · 18 px · Regular · #000000
Corner radius 10 px

Illustration, title, content and Read More link; content center-aligned.

BUTTON STYLE

On light Roboto · 14 px · Bold · #BE1D2C
On dark Roboto · 14 px · Bold · #FFFFFF
Shape 3 px radius · 50 px height

Values and samples from the project style sheet in the original portfolio.

RESPONSIVE WEB

FINAL UI SHOWCASE

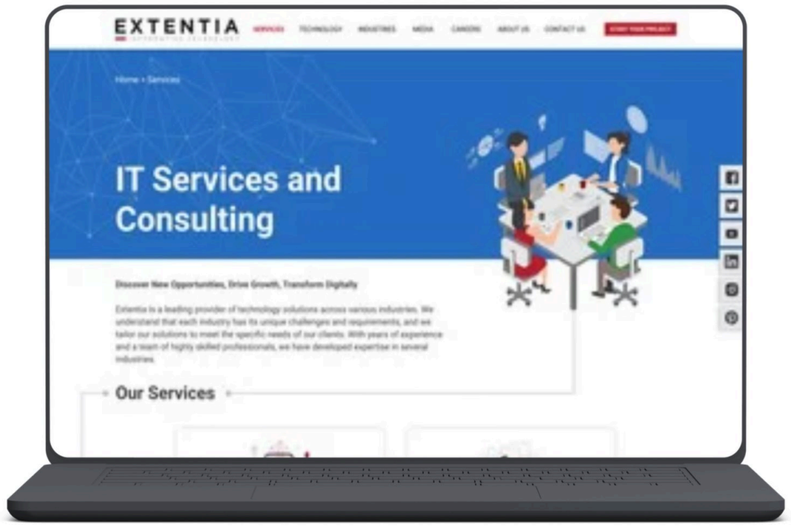

Two service pages shown on desktop and mobile.

Navigation
Desktop shows the full top menu; mobile collapses it into a menu icon and adds a bottom icon bar.

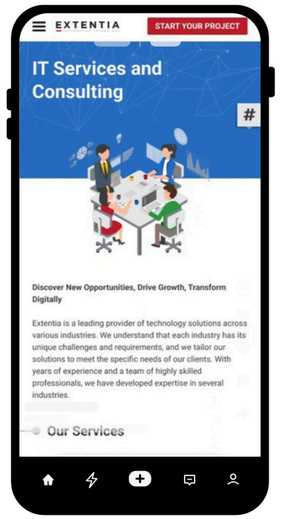

Hero
The red or blue hero band keeps its title and illustration, stacked vertically on mobile.

Content
Body copy moves from a wide column to a single narrow column.

SELECTED WORK / CASE STUDY 02

WORKFUSION HRMS

TIMELINE

February 2024 — June 2024

CATEGORY

HRMS / Enterprise Application / Product UX

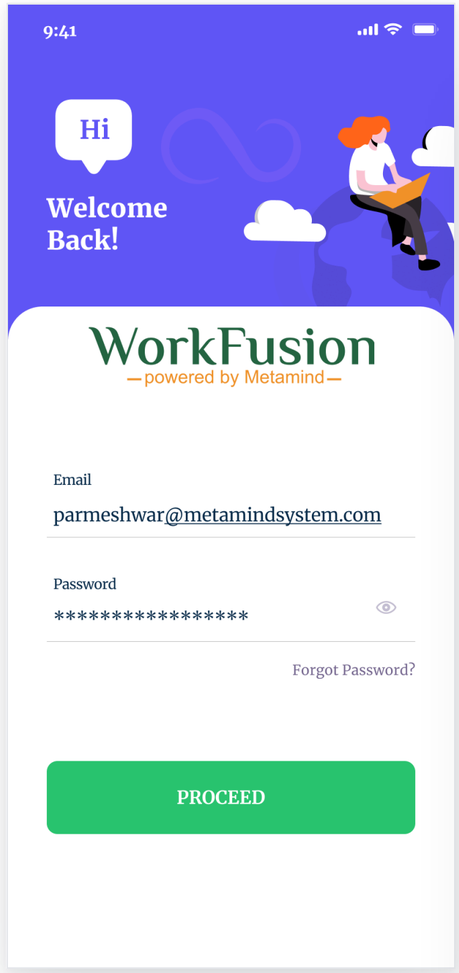

ROLE

UI/UX Designer / Product Designer

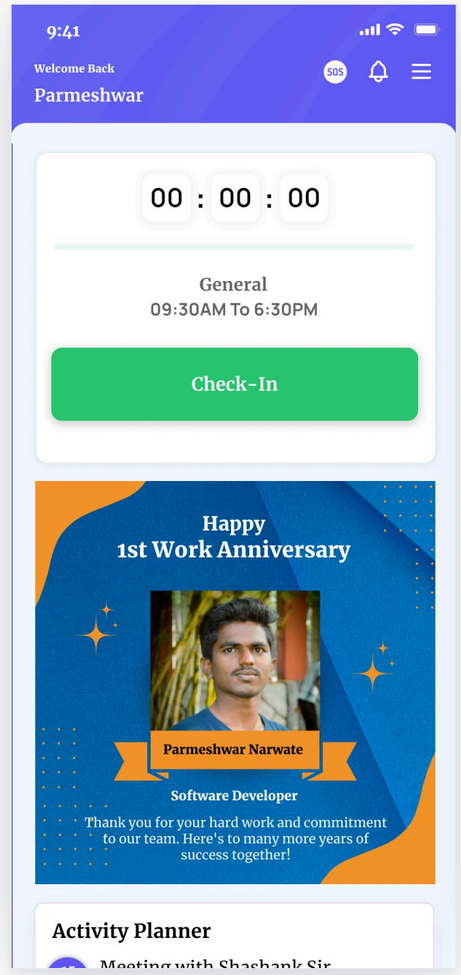

A mobile-first employee self-service app for WorkFusion HRMS — attendance check-in, leave and approvals, company information and requests — with separate views for employees and for approvers or HR.

> **My contribution: information architecture, mobile UI design for the modules shown, and the color and sizing tokens behind them.**

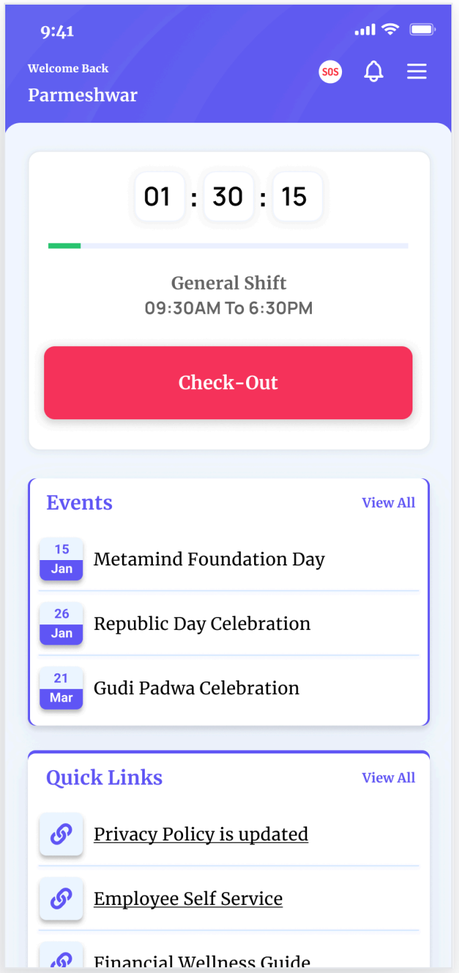

ATTENDANCE · LEAVE · APPROVALS · SELF-SERVICE

LOGIN

HOME · CHECK-IN

CHECKED IN

PRODUCT STRUCTURE

ONE HOME, ONE SERVICES GRID

Every screen shares the same header and bottom bar, so people always know where they are and how to get back.

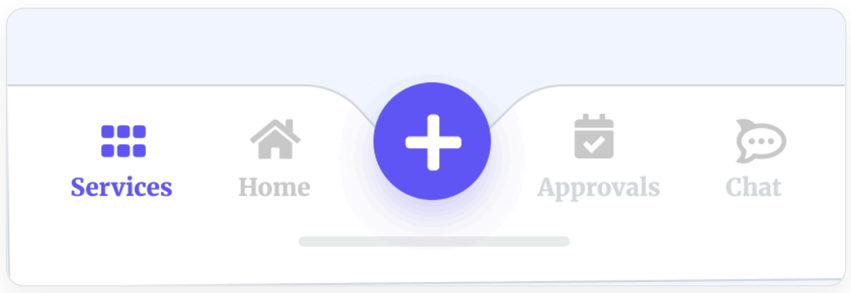

Persistent header

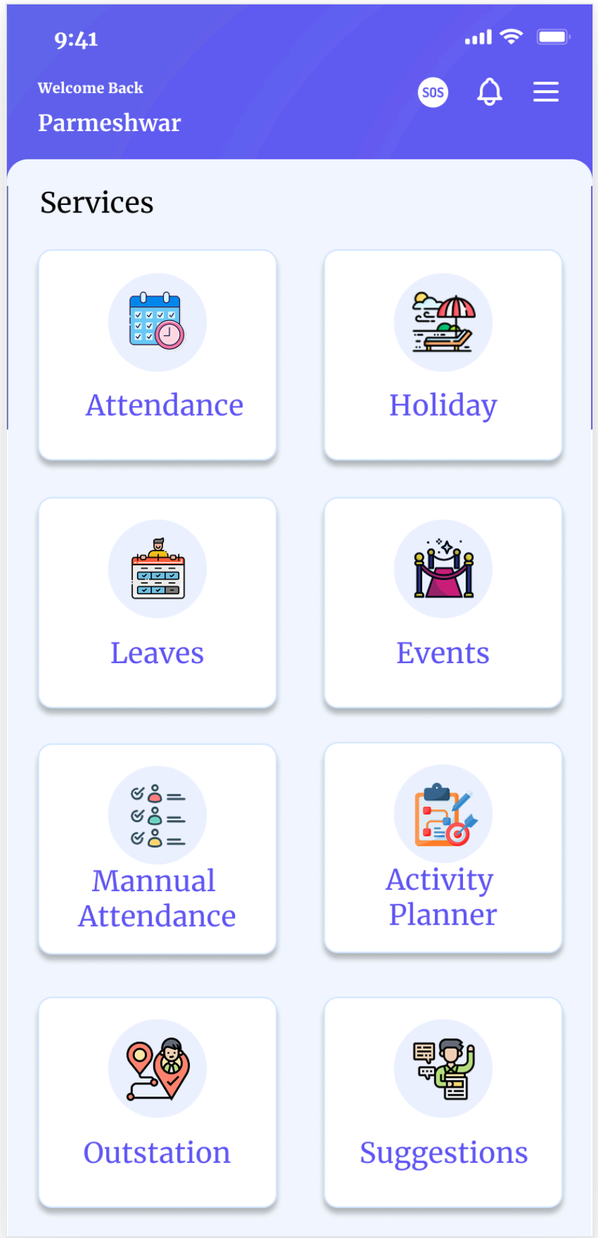

Greeting and name, with SOS, notifications and menu always in the same place.

Bottom bar

Services · Home · Add · Approvals · Chat. Home and Services are one tap apart.

SERVICES GRID

Services grid

Ten modules as large icon tiles, each opening its own sub-menu or list.

- **Attendance**
- **Holiday**
- **Leaves**
- **Events**
- **Manual Attendance**
- **Activity Planner**
- **Outstation**
- **Suggestions**
- **Staff**
- **Visitor**

The in-app tile reads “Mannual Attendance”.

FLOW 01

ATTENDANCE CHECK-IN

The daily check-in lives in one card at the top of Home.

01 Initial state

Before check-in, the card shows the assigned shift (General, 09:30 AM to 6:30 PM), a timer at 00:00:00 and one green Check-In button.

02 Checked-in state

After check-in the timer starts running and a progress bar appears under it.

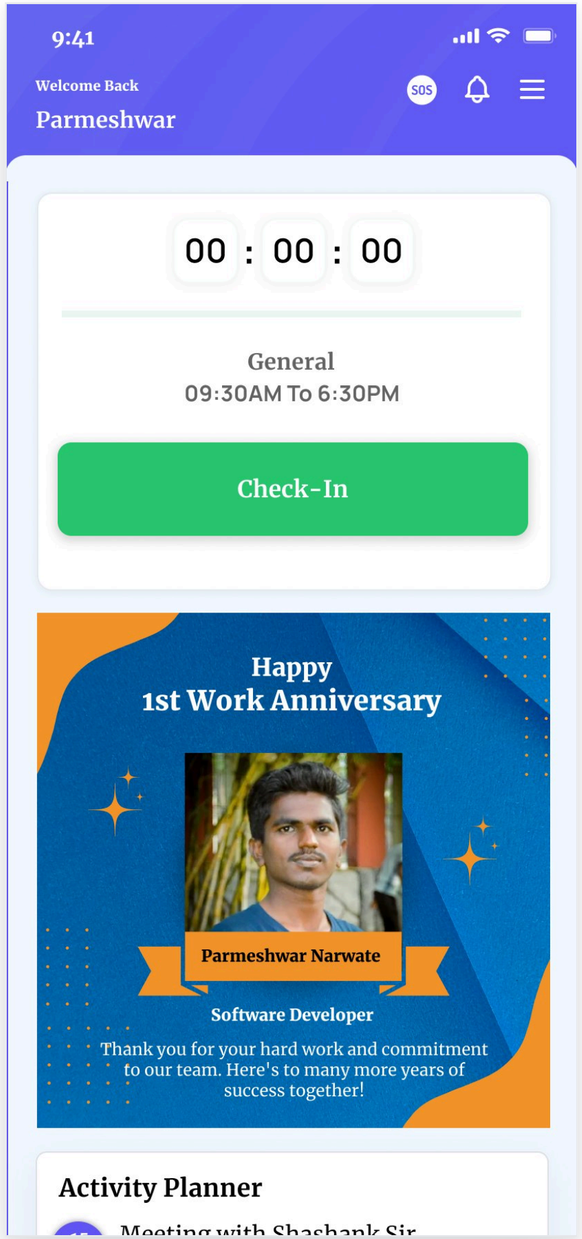

03 Primary action changes

The same button becomes a red Check-Out, so the card offers only the next action.

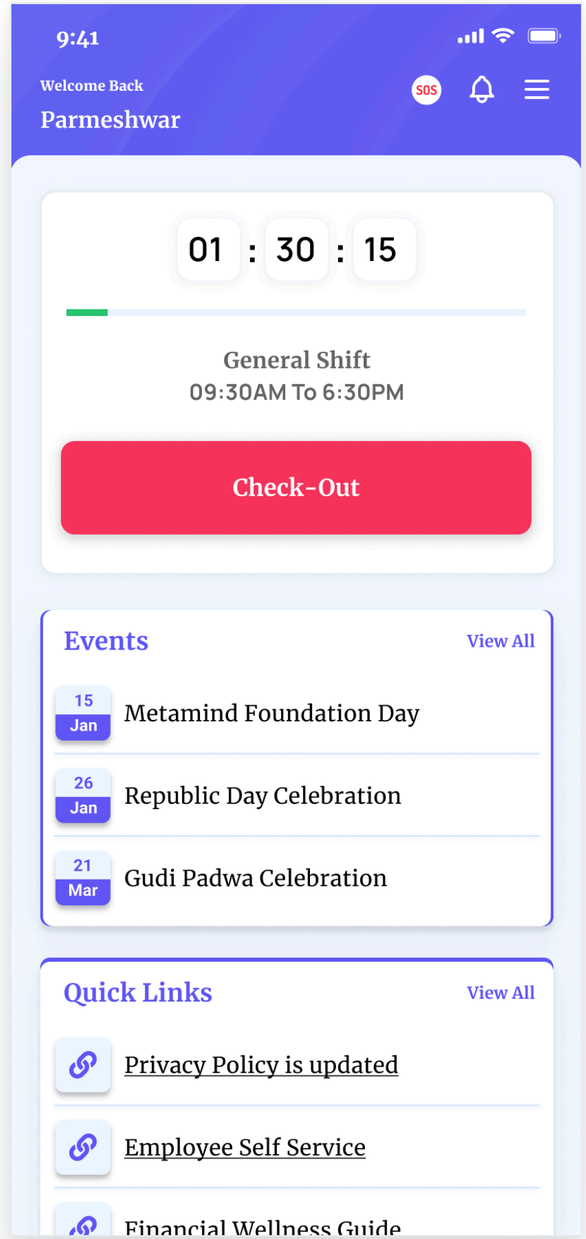

04 Predictable location

The card keeps its position at the top of Home. The rationale: a task done every day should sit where people expect it.

Design rationale, not a measured result.

BEFORE · CHECK-IN

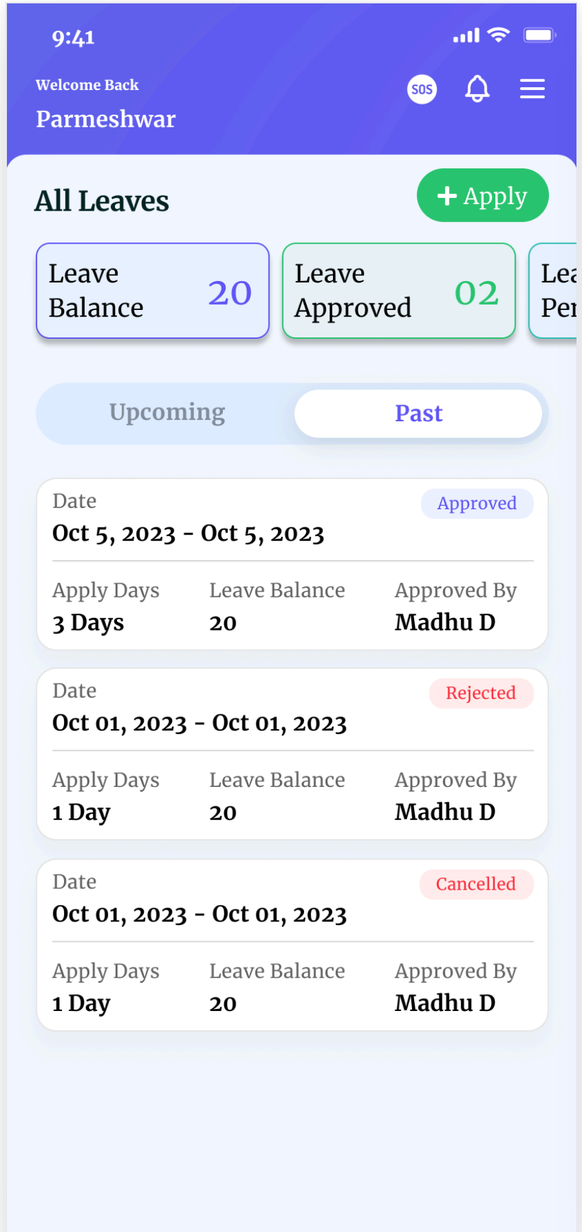

AFTER · CHECK-OUT

FLOW 02

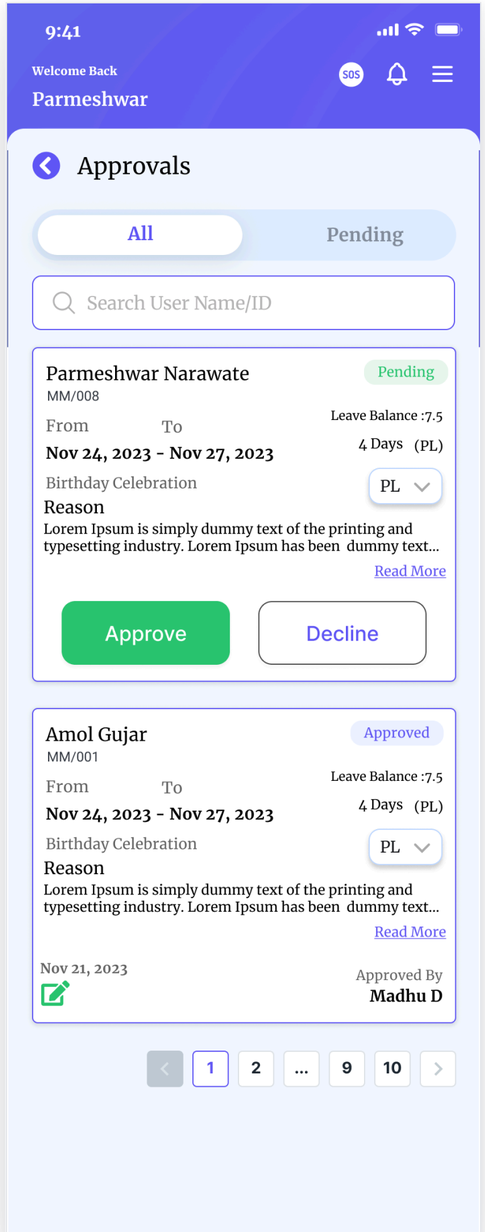

LEAVE & APPROVALS

The same leave request, seen from two sides.

	EMPLOYEE	APPROVER
Purpose	Track my own leave	Decide on other people's leave
Information shown	Balance, approved, pending and cancelled counts; each request with dates, days, balance and approver	Each request with employee name and ID, dates, days, leave type, leave balance and reason
Actions	Apply; switch between Upcoming and Past	Approve or Decline; search by name or ID; filter All or Pending
Statuses	Approved · Rejected · Cancelled · Pending	Pending · Approved (with approver name)

EMPLOYEE · LEAVES (PAST)

APPROVER · APPROVALS

ROLE-BASED WORKFLOWS

EMPLOYEE & APPROVER VIEWS

Several modules are designed twice: once for the employee raising a request, once for the approver or HR acting on it.

MODULE	EMPLOYEE	APPROVER / HR
Leave encashment	Request encashment and follow each request's status	Review requests by type and status; approve or reject
Suggestions	Submit a suggestion with title, message and photo; track its status	Review submitted suggestions and reply
Appraisal	See previous and new designation, salary and effective date	View appraisal details for each employee
Attendance	Check in and out; view reports; request regularization	Mark manual attendance for listed staff
Staff	View my profile — personal details, experience, documents and more	Browse staff and manage access settings, such as app, biometric and location access

Figma frames: Leave Encashment User / Request · Suggetions / Suggetions HR · Apprisal User / Admin · Mannual attendance · Staff List / Staff Profile (spellings as in the source file).

PRODUCT EXPERIENCE

ENTERPRISE UX WORKFLOW

The six-step workflow used on WorkFusion HRMS, described by what the designs show.

STEP 01

Understand

USER NEEDS

Design focus on fast access to daily tasks: attendance check-in, leave requests and personal profile updates.

STEP 02

Define

BUSINESS REQUIREMENTS

Requirements visible in the designs: role-based access settings, approval steps, and shift and weekly-off policies.

STEP 03

Structure

INFORMATION ARCHITECTURE

Attendance, leave, approvals, staff and company information grouped into one Services grid with module sub-menus.

STEP 04

Design

UI & COMPONENT SYSTEM

Mobile screens, forms, list cards and status chips, alongside color, sizing and component tokens.

STEP 05

Prototype

FLOWS & STATES

Journeys laid out as screen sequences, including empty, success and pop-up states.

STEP 06

Refine

CONSISTENCY

Shared header, navigation, status styles and form actions across modules; tokens defined as Figma variables.

DESIGN CONSIDERATIONS

KEY UX CHALLENGES

Each challenge, the design response, and where it shows in the screens.

01 INFORMATION DENSITY

CHALLENGE Leave data has many numbers per request.

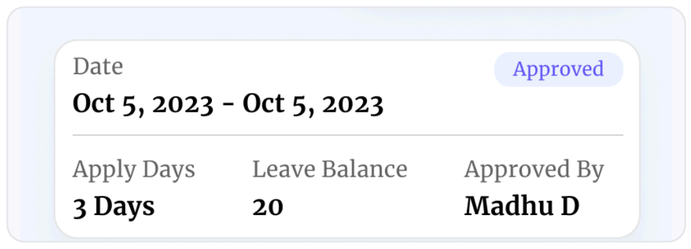

DESIGN RESPONSE Summary cards for totals; one card per request with labelled fields.

02 SYSTEM CONSISTENCY

CHALLENGE Many modules risk drifting apart.

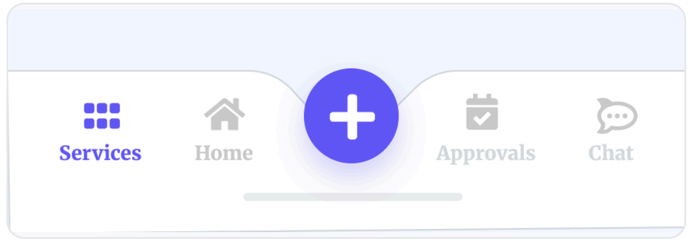

DESIGN RESPONSE One status-chip style (Approved, Rejected, Cancelled) and one card layout reused across lists.

03 NAVIGATION HIERARCHY

CHALLENGE Ten modules on a small screen.

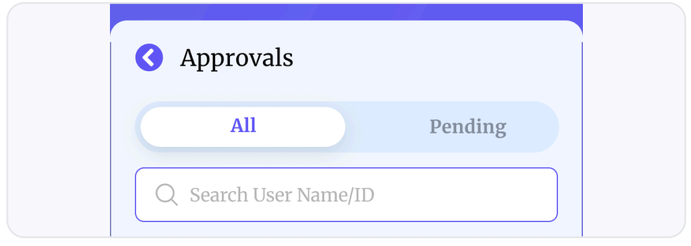

DESIGN RESPONSE Bottom bar → Services grid → module sub-menu.

04 RESPONSIVE ADAPTABILITY

CHALLENGE Long, variable content in a fixed mobile viewport.

DESIGN RESPONSE Tabs and search to narrow lists; pagination for long queues.

SCALABLE UI FRAMEWORK

DESIGN SYSTEM

Tokens from the Figma “Design System” page and file variables, re-checked on 22 Oct 2026.

COLOR PALETTE

Blue #0075F3	**Indigo** #6610F2	**Purple** #8A62D8	**Pink** #E149C0
Red #F5365C	**Orange** #FD7E15	**Yellow** #FFE16A	**Green** #28C76F
Teal #20C997	**Sky Blue** #11CDEF	**Grey** #A79EB7	

11 ramps from 50 to 950; the 500 step is shown.

SEMANTIC COLORS

	SUBTLE	LIGHTER	DEFAULT	DARKER
Primary	#F2EFFB	#B4A0E9	#8A62D8	#562E97
Error	#FDEDEE	#F898A3	#F5365C	#981733
Warning	#FFF4F1	#FEB59B	#FD7E15	#974807
Success	#DEFFE6	#32EC85	#28C76F	#12753F

TYPOGRAPHY

Merriweather

Regular · Bold · Black

16 · 12 · 14 · 15 · 20 px (most used first)

Most-used typeface and sizes counted across App screen text layers. No text styles are defined in Figma.

TEXT & SURFACE TOKENS

Title	#251F2E	**Body**	#453C54
Subtitle	#86799B	**Caption**	#A79EB7
Border	#B7B0C4	**Surface**	#F7F6F8

REUSABLE COMPONENTS

Input Field · Avatar · Checkbox · Radio · Badge · Pagination · Card

SPACING

3XS	2
2XS	4
XS	6
S	8
M	12
L	16
XL	20
2XL	24
3XL	32
4XL	40

RADIUS

XS	6	S	8	M	12
L	16	XL	20	Full	99

COMPONENT SIZING · S / M / L

	S	M	L
Radius	8	12	16
Spacing	4	8	12
H-padding	16	20	24
V-padding	8	12	16
Icon size	20	24	32

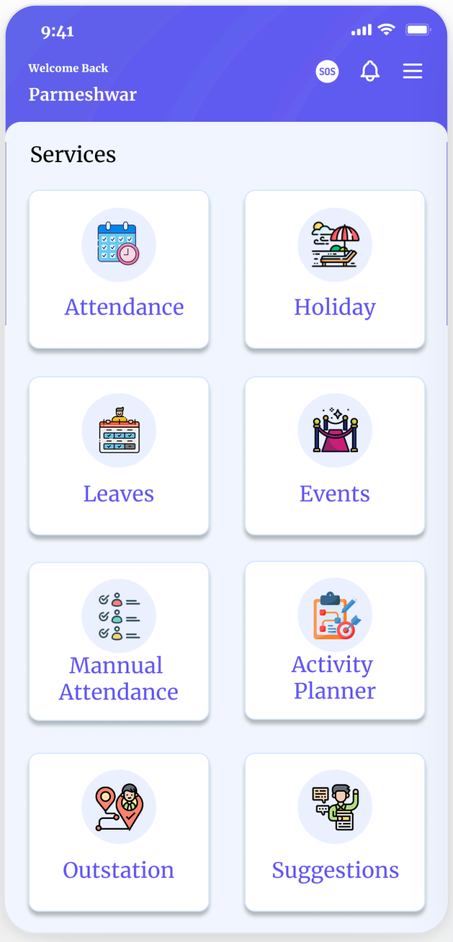

The App screens apply the client’s brand indigo (about #6155F5) across headers and primary actions; the tables above document the design-system foundation.

MOBILE UI SHOWCASE

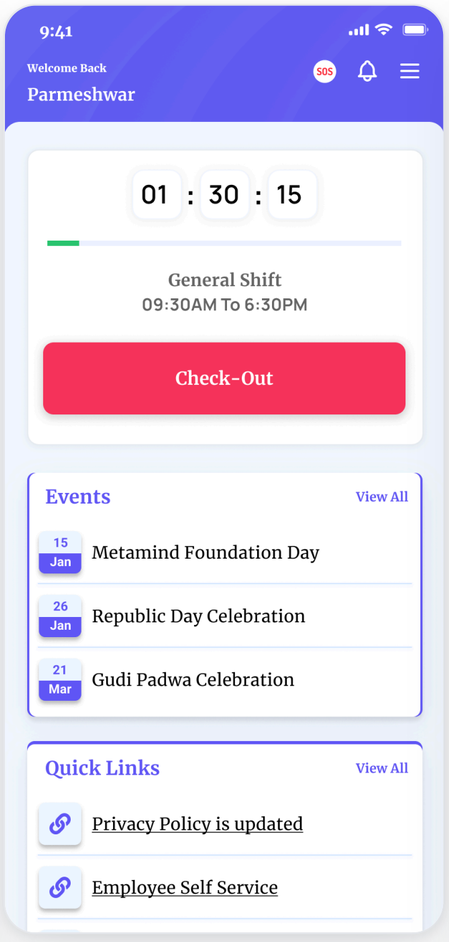

Employee self-service on mobile — login, services, attendance, regularization and the weekly attendance report.

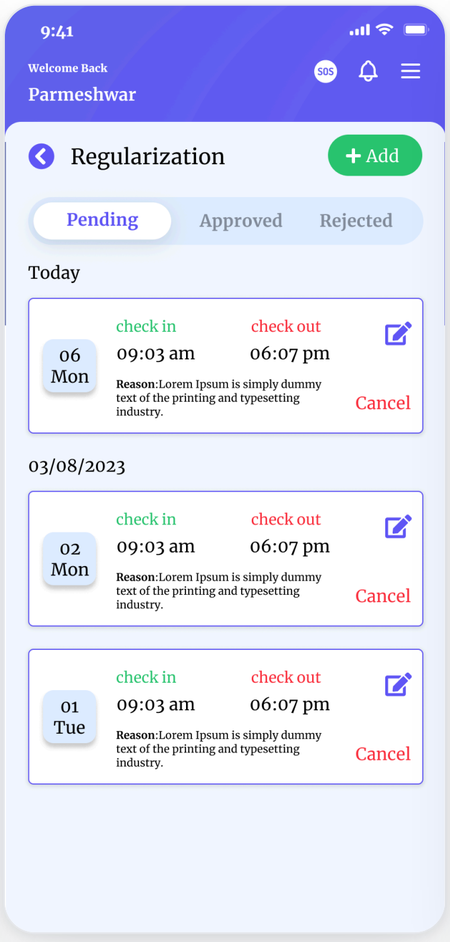

LOGIN

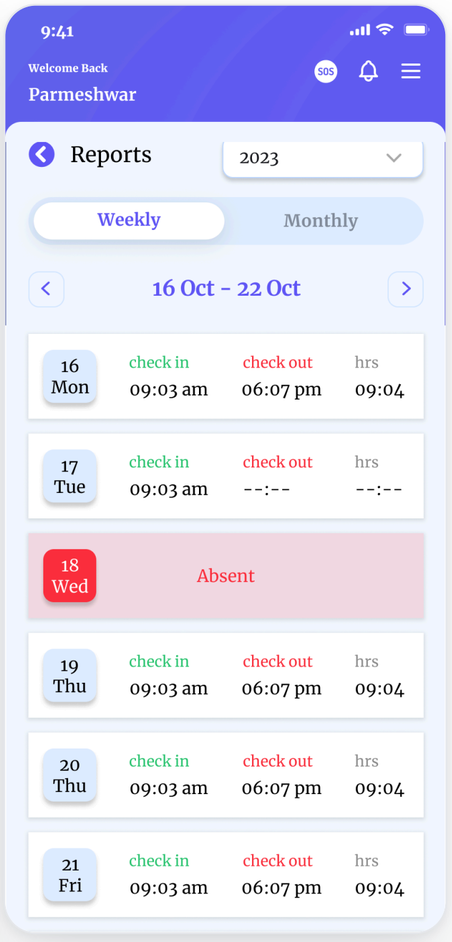

SERVICES

ATTENDANCE

REGULARIZATION

WEEKLY REPORT

All five are 2× exports from the Figma App page, shown from the top of each screen.

03

SELECTED WORK / CASE STUDY 03

DOCUMENT MANAGEMENT SYSTEM

TIMELINE

January 2025 — August 2025

ROLE

UI/UX Designer

A structured document experience for managing files, access permissions, workflows, and document history.

PROJECT OVERVIEW

The DMS concept brings document handling into a structured workspace where files, users, branches, permissions, and document actions are connected. The design work focuses on making common actions easier to find while keeping access and document history understandable. The latest Figma designs extend this into an AI-assisted workspace: document intelligence in the file manager, intelligent forms, a conversational copilot and OCR.

PROJECT TYPE

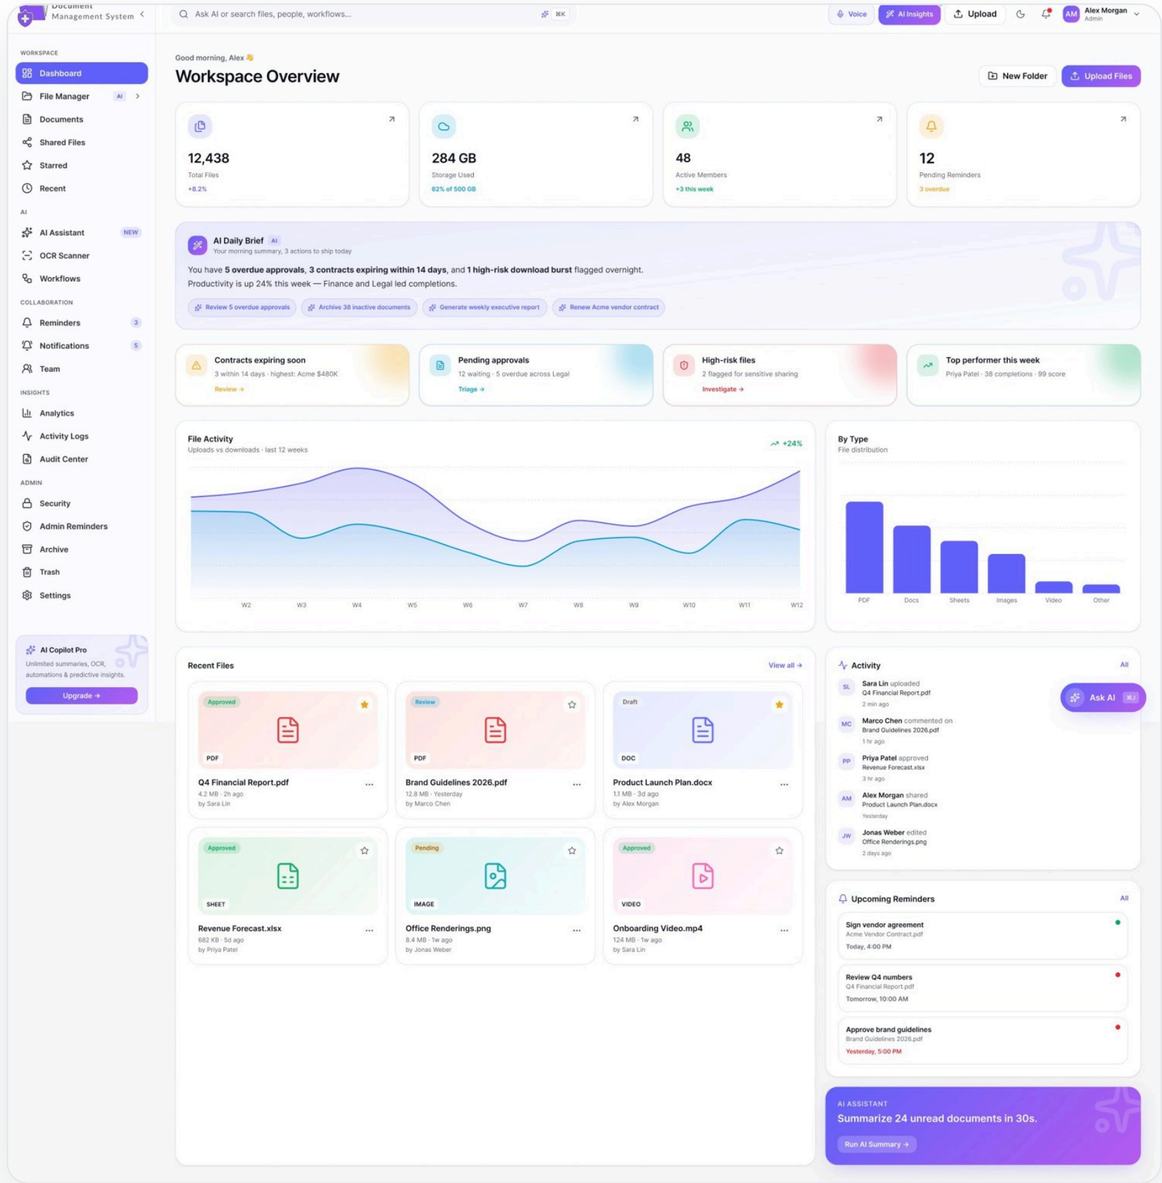

Enterprise SaaS · Document management

DESIGN SCOPE

UX flows, information architecture, Figma UI design, permission mapping

CORE FOCUS

Secure access, document lifecycle, workflow visibility

WORKSPACE OVERVIEW

Dashboard · AI daily brief, alerts, file activity, recent files, reminders

Screens from the DMS Figma file (desktop web). Names and figures in the screens are placeholder data.

DESIGN GOALS

ORGANIZE · CONTROL · TRACE

01

ORGANIZE

Bring files and branch-based organization into a clear information structure.

02

CONTROL

Make actions such as view, download, update, share, lock, archive, and delete permission-aware.

03

TRACE

Make document versions, audit history, reminders, and workflow activity easier to follow.

INFORMATION ARCHITECTURE

A CLEARER DOCUMENT JOURNEY

Organize the workspace around the relationship between users, branches, files, permissions, and lifecycle actions.

WORKSPACE
Entry point for document work

→

BRANCH
Organize access by branch

→

DOCUMENT
Find and manage files

→

PERMISSION CHECK
Show only allowed actions

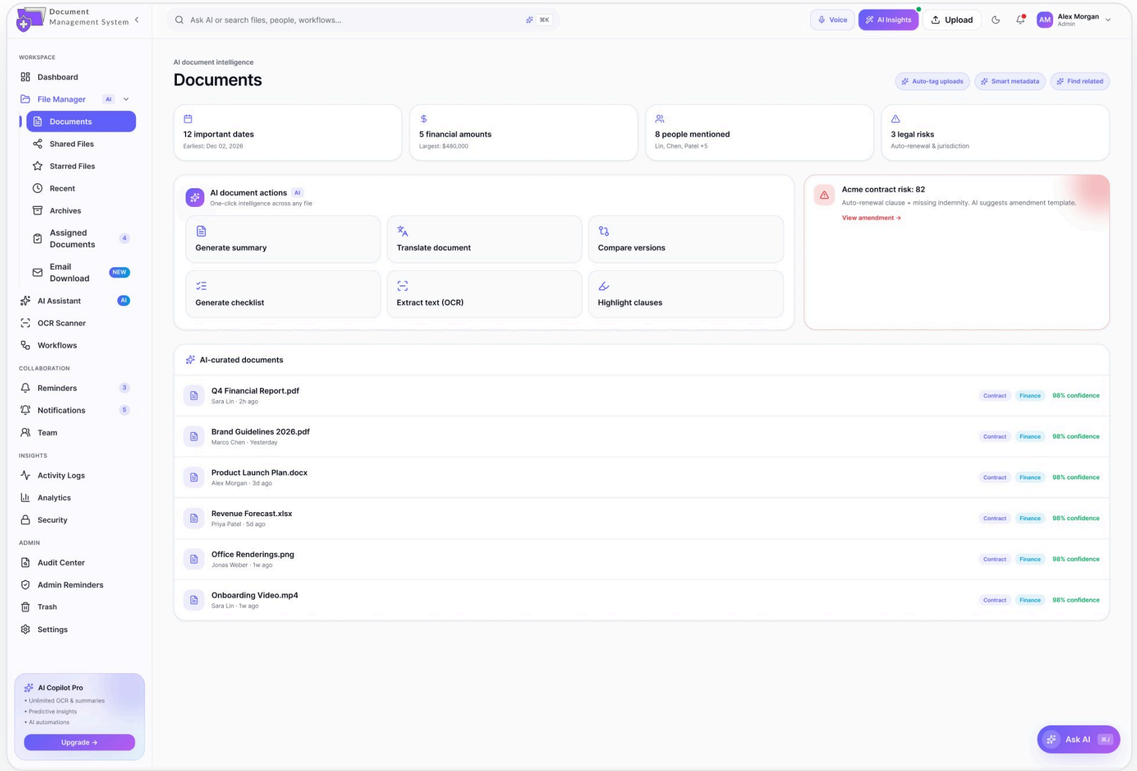

→

ACTION / HISTORY
Record versions and activity

FILE MANAGER

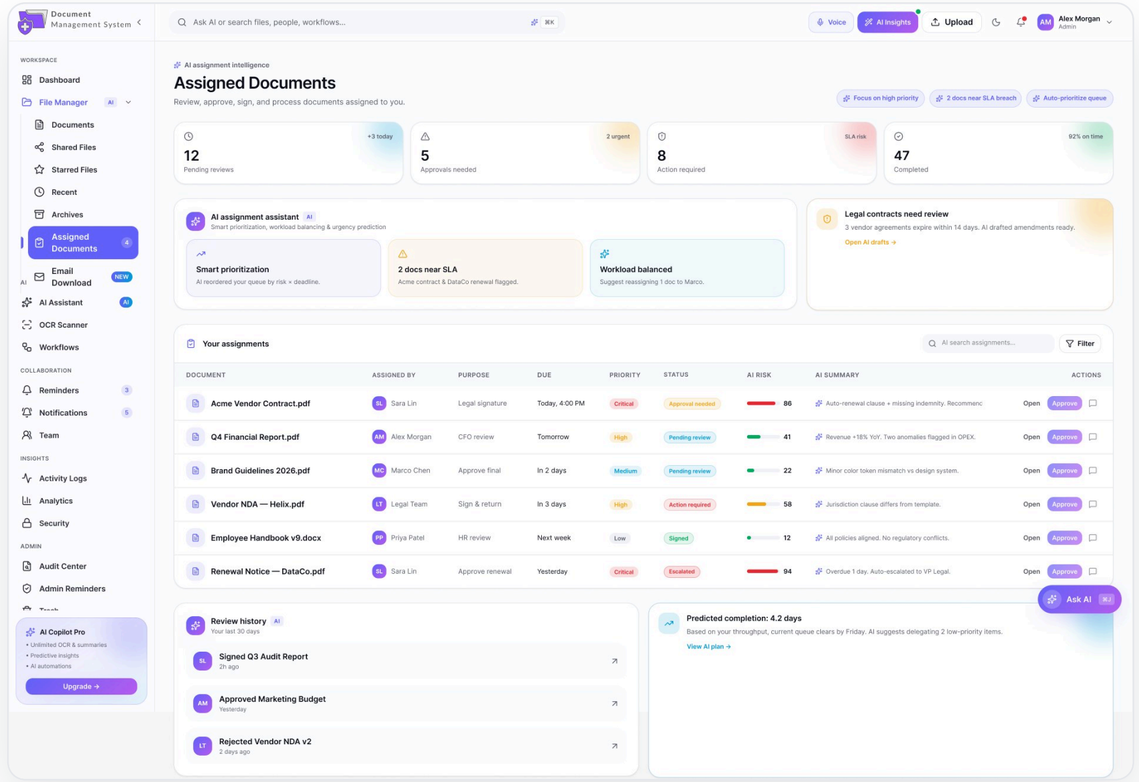

AI DOCUMENT WORKSPACE

The file manager puts status, risk and the next action next to the documents themselves.

DOCUMENTS

One-click AI actions (summary, translation, version compare, checklist, OCR, clause highlights), extracted dates, amounts, people and risks, and an AI-tagged document list.

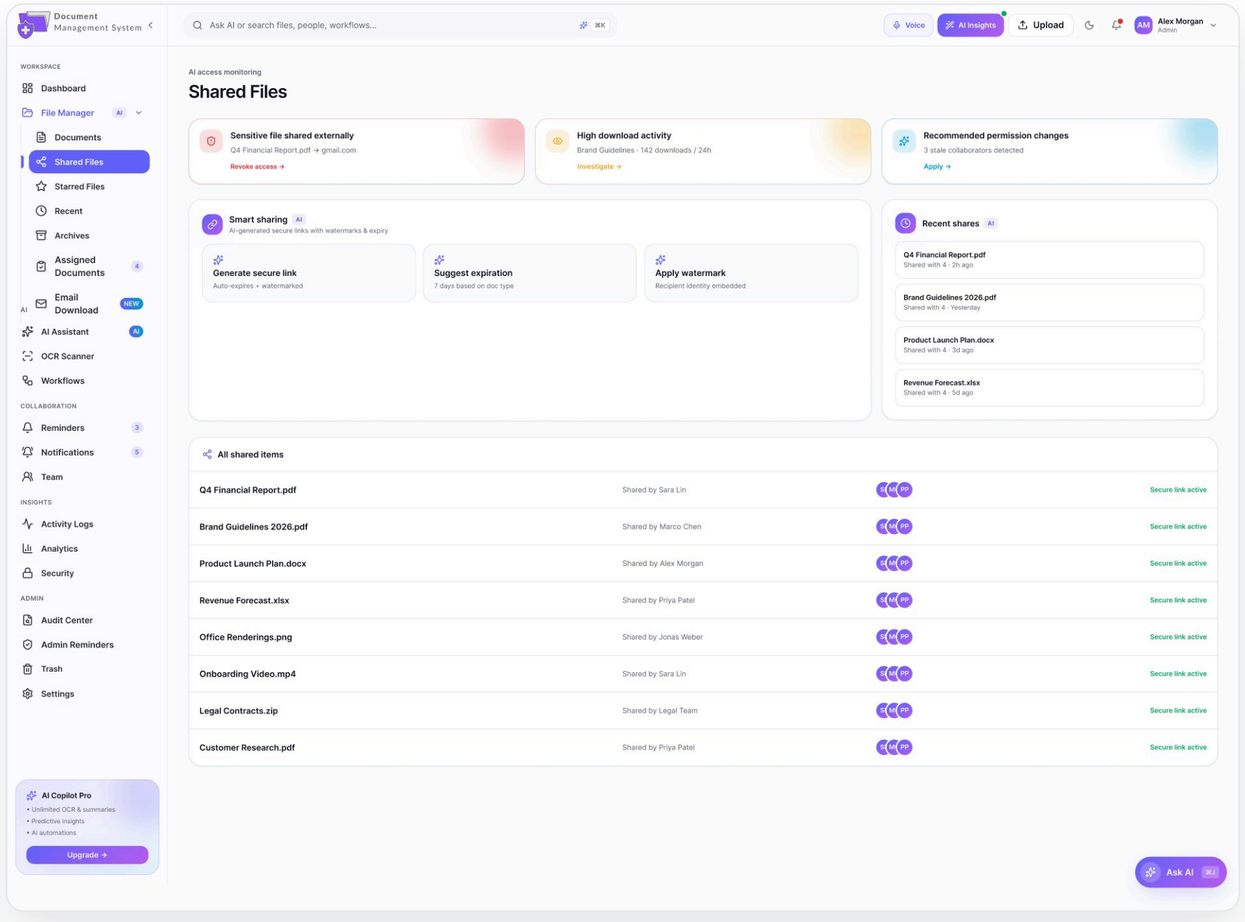

ASSIGNED DOCUMENTS

A review queue showing purpose, due date, priority, status, an AI risk score and summary, with Approve in the row and review history below.

ACCESS & LIFECYCLE

SHARING, RETENTION & INTAKE

Sharing stays visible, older files stay under control, and incoming documents arrive organized.

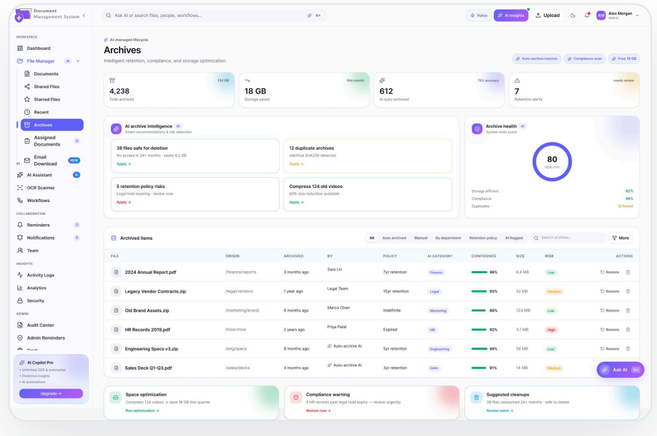

SHARED FILES

Alerts for external shares, unusual downloads and stale collaborators; secure links with expiry and watermark; every shared item with its link status.

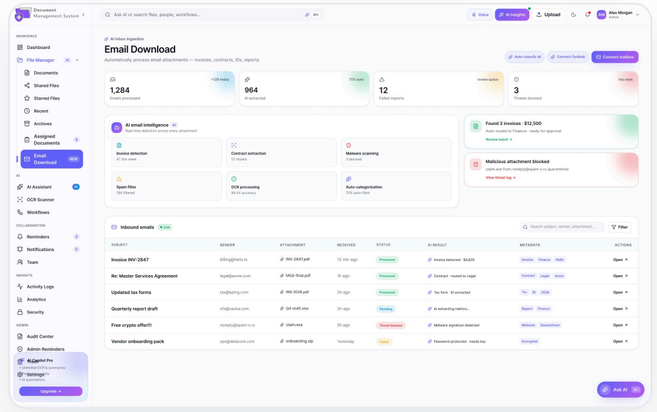

ALSO IN THE NAVIGATION

Starred · Recent · Workflows · Reminders · Activity Logs · Audit Center · Security · Trash

ARCHIVES

Retention, compliance and storage optimization.

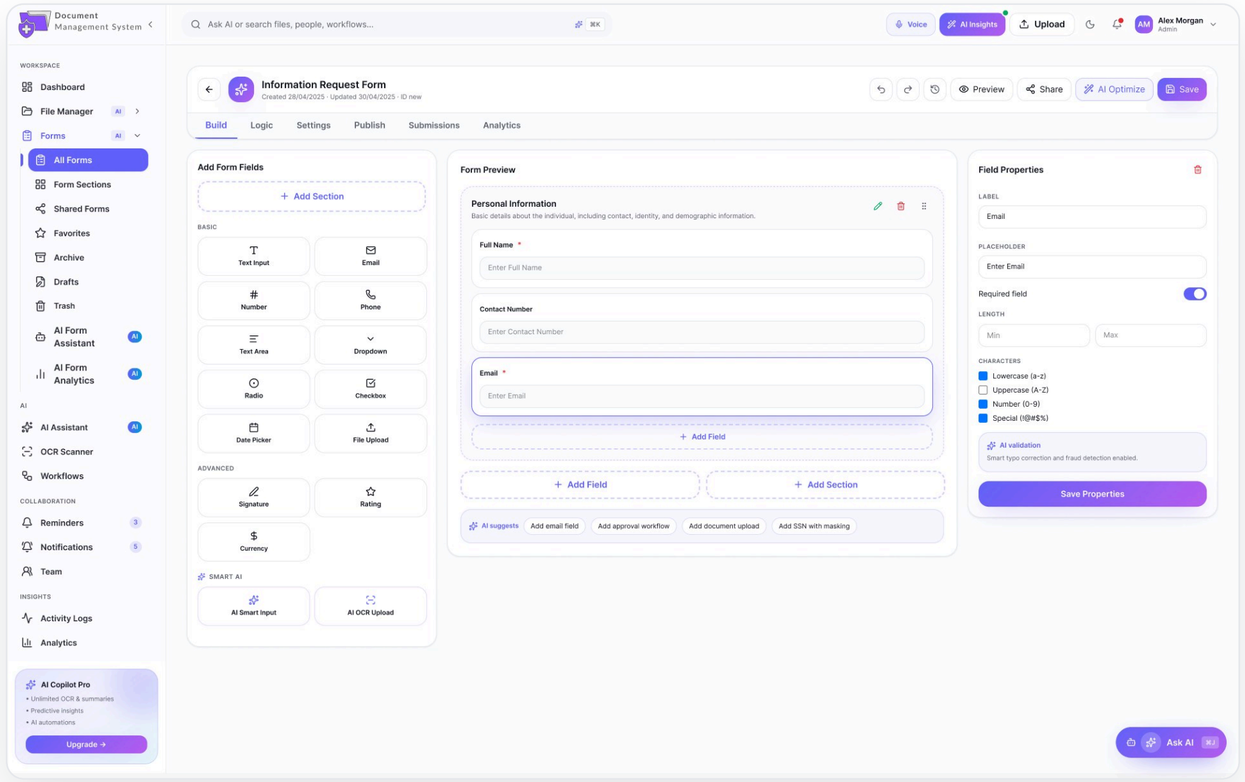

EMAIL DOWNLOAD

Automatic processing of email attachments — invoices, contracts, IDs, reports.

FORMS

INTELLIGENT FORMS

A forms workspace inside the DMS: build, publish and review forms, with AI help at each step.

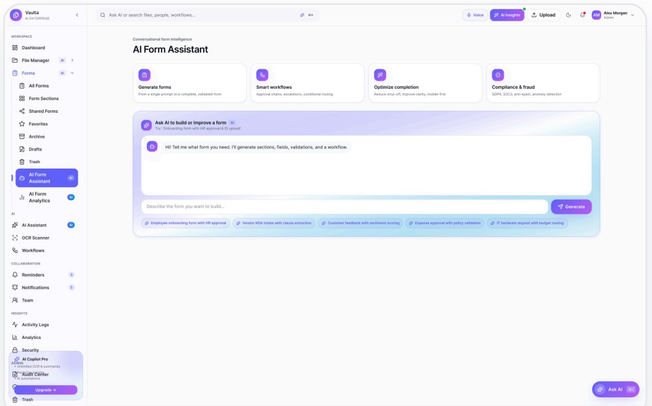

FORM BUILDER

Field palette (basic, advanced, smart AI), live preview and field properties, with Build, Logic, Settings, Publish, Submissions and Analytics tabs.

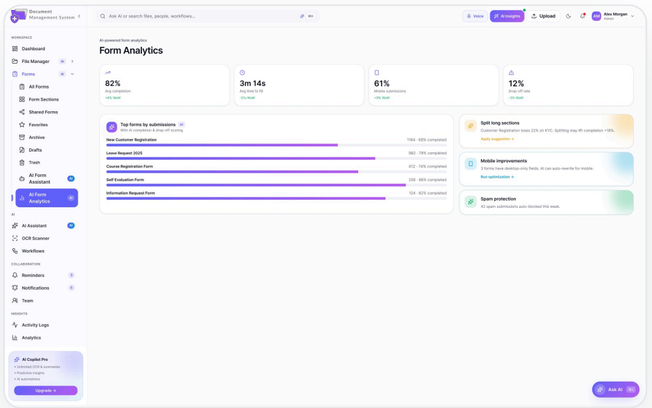

ALSO DESIGNED

All Forms · Create Intelligent Form · Form Sections · Shared Forms · Drafts

AI FORM ASSISTANT

Describe a form in plain language; the assistant drafts sections, fields, validations and a workflow.

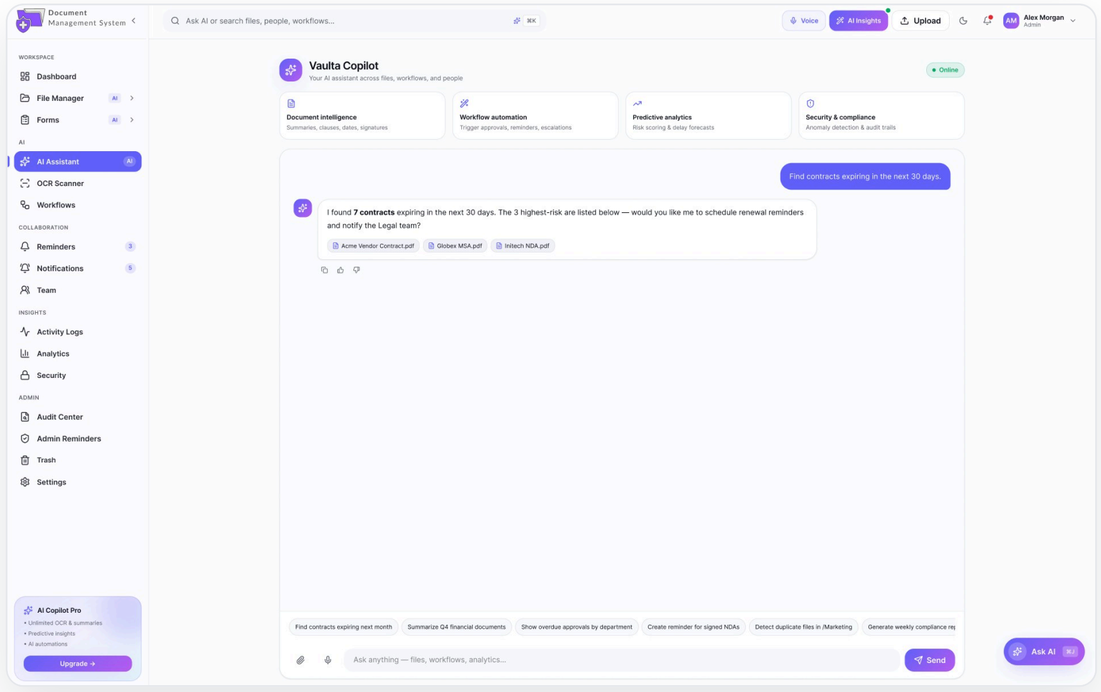

FORM ANALYTICS

Completion and submission insights for each form.

AI ASSISTANCE

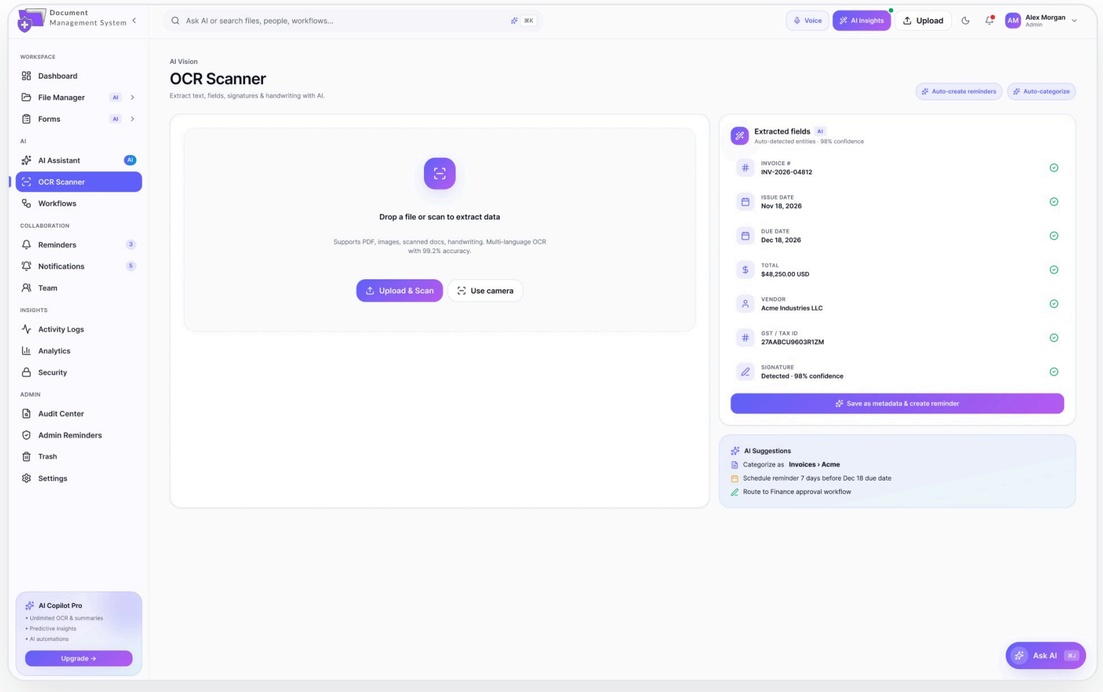

COPILOT & OCR

Two AI entry points: a conversational assistant across files and workflows, and OCR that turns scans into structured data.

COPILOT

Ask in plain language (for example, contracts expiring in 30 days) and get matching files with a suggested next step.

OCR SCANNER

Upload or scan; extracted fields such as invoice number, dates, total, vendor and signature, with suggestions to categorize, set a reminder and route for approval.

DOCUMENT INTELLIGENCE
Summaries, clauses, dates, signatures

WORKFLOW AUTOMATION
Approvals, reminders, escalations

PREDICTIVE ANALYTICS
Risk scoring and delay forecasts

SECURITY & COMPLIANCE
Anomaly detection and audit trails

Capability areas as labelled on the Copilot screen.

DESIGN CONSIDERATIONS

KEY UX CHALLENGES

The interface needs to support everyday file handling without losing control, context, or traceability.

CHALLENGE 01	**PERMISSION CLARITY**	Users should understand which actions are available to them. The design scope includes permission-aware actions for viewing, downloading, updating, sharing, locking, archiving, and deleting documents.
CHALLENGE 02	**DOCUMENT LIFECYCLE**	A file may be updated, moved, archived, or placed in the bin. Clear action labels and predictable placement help users understand the effect of each operation.
CHALLENGE 03	**VERSION & AUDIT TRACEABILITY**	Version history and audit logs provide a place to review document changes and activity instead of treating a file as a single static item.
CHALLENGE 04	**WORKFLOW FOLLOW-THROUGH**	Workflow assignment, reminders, email notifications, and signatures connect document handling with the next action that needs attention.

DESIGN PRINCIPLES

MAKE ACTIONS DISCOVERABLE

KEEP PERMISSIONS VISIBLE

PRESERVE DOCUMENT CONTEXT

SUPPORT TRACEABILITY

DESIGN CONTRIBUTION

FROM WORKFLOWS TO A COHERENT UI

The design focus is to make a feature-rich document management experience easier to navigate and more consistent to use.

INFORMATION ARCHITECTURE

Structure the relationship between users, branches, files, document properties, and configuration.

UX FLOWS & PERMISSION MAPPING

Map the available document actions and make access rules part of the interaction model.

FIGMA UI DESIGN

Create a consistent interface direction for document handling and supporting administrative features.

WORKFLOW & HISTORY STATES

Account for version history, audit logs, workflow assignment, reminders, email, and signatures.

DOCUMENT ACTIONS IN SCOPE

ACCESS & FILE ACTIONS

- Open
- Download
- Update
- Share / shareable link
- Lock
- Move
- Archive
- Move to Bin

WORKFLOW & COLLABORATION

- Assign workflow
- Custom forms and workflows
- Email notifications
- Reminders
- Signatures

HISTORY & ADMINISTRATION

- Version history
- Create new versions
- Audit log
- Document properties
- Configuration
- User and branch permissions

CLOSING

Thank You.

Let’s create meaningful digital experiences.

Thank you for taking the time to explore my work. I look forward to contributing thoughtful UX, intuitive interfaces and scalable design solutions to meaningful products.
